**ENCLOSURE 5 – PROTOCOL
PRP RANKING BY WEIGHT**

1.0 INTRODUCTION

The United States Environmental Protection Agency (U.S. EPA) has obtained transactional data for shipments of materials to the Chemetco Hartford, Illinois site (Chemetco site). This data has been summed by supplier to generate a waste-in list and a ranking of suppliers by weight. This memorandum provides a brief background of the Chemetco facility and its operations, describes the transactional data and its source, and outlines the methodology used to generate the Chemetco PRP Ranking by Weight (Chemetco PRP List). Information about the Chemetco site contamination and EPA's investigation of the site, including documents referenced herein, can be found at <http://www.epa.gov/region05/cleanup/chemetco/index.html> (Chemetco website).

2.0 BACKGROUND

Chemetco, Inc. (Chemetco) operated a secondary copper smelting facility at Hartford, Illinois from 1970 to 2001. During this time period, Chemetco and its affiliated companies also operated facilities at other locations. The PRP List for the Chemetco site was developed by identifying suppliers of shipments solely to the Hartford facility.

U.S. EPA conducted interviews of former Chemetco employees to gain an understanding of how shipments of materials to the Chemetco site were processed and tracked. Early in its operations, the Chemetco site received materials directly from suppliers. Chemetco later developed a network of regional warehouses to collect materials across the country. Materials shipped to the warehouses were aggregated by type and transported to Chemetco facilities for smelting, including the Chemetco site in Hartford. Chemetco used a Wang 7310 computer (Wang System) to administer its accounting system and track transactions with suppliers throughout its organization. Chemetco began using the Wang System in the late 1970s or early 1980s. To date, U.S. EPA has obtained data from the Wang System primarily for the years 2000 and 2001. This data is the source of the Chemetco PRP List.

3.0 CHEMETCO TRANSACTIONAL PROCESSES

Chemetco used the Wang System to track the lifecycle of each transaction with its suppliers. Before receiving shipments, Chemetco usually entered into a Purchase Contract with the supplier. The contract was assigned a unique contract number and relevant contract details were entered into the system. Record of a Purchase Contract indicates that Chemetco and the supplier entered into an agreement to

ship material to a Chemetco facility; however, it does not serve as evidence that shipments actually occurred.

Material was shipped to the Chemetco site either directly by the supplier, or via a warehouse. Chemetco's accounting system assigned unique identifiers to the delivered material that distinguished direct shipments to the site versus shipments that were delivered via warehouses.

When a shipment arrived at the Chemetco site scale house, it was weighed by type of material and assigned a unique four-digit "lot number" that was entered into the Wang System. The lot number is the ID that Chemetco attached to each shipment to the site. Data entered in the Wang System for each lot number included the supplier name, type of material, weight of the shipment and date of the transaction.

Many suppliers shipped materials to a Chemetco warehouse, where the materials were compiled with other like-materials, and then shipped to the Chemetco site. Materials delivered to a warehouse were weighed and assigned a unique six-digit warehouse lot number. For shipments to the Chemetco warehouse, data entered in the Wang System for each six-digit lot number included the supplier name, type of material, weight of the shipment and date of the transaction.

When aggregated materials were shipped from a warehouse to the Hartford site, the shipment was assigned a four-digit lot number by material type as it arrived at the scale house, similar to direct shipments to the site. For these shipments, the warehouse was identified as the supplier. Specifically, the term "Warehouse" was entered as the supplier name in the Wang System. Using the lot number system (the six-digit warehouse lot number and the four-digit site lot number), shipments that were originally delivered to a warehouse before delivery to the Chemetco site can be tracked and linked to the supplier.

3.1 Source of Transactional Data

The sources of the transactional data used to generate the Chemetco PRP List are data files from Chemetco's Wang System. This system consists of numerous "libraries" or tables that were organized to capture and track materials from the initial Purchase Contract between suppliers and Chemetco buyers through shipment and delivery of the materials for processing. The Wang System contained separate data files for Chemetco companies, enabling Chemetco to scale the system as new companies and facilities were created. This Protocol addresses the transactional data related to the Hartford site.

The Illinois Environmental Protection Agency (IEPA), as lead agency, initiated a PRP search of the Hartford site in 2003. With the assistance of a former Chemetco employee, an IEPA contractor retrieved data from the onsite Wang Computer in 2003. In 2008, IEPA tasked its contractor to return to the site and retrieve data from the onsite Wang computer to confirm that all available data had been collected. IEPA provided the 2003 and 2008 data to U.S. EPA in 2010, when the Chemetco site was added to the National Priority List (NPL) and U.S. EPA assumed lead agency status. Much of the data collected in the two retrieval efforts were identical, although the 2008 data contained additional files related to different time periods of transactions and included data regarding other Chemetco companies. The

Wang System structure and data files are described more fully in *Chemetco Metadata on Wang Data 1303013* available at the Chemetco website.

3.2 Summary of Relevant Wang Data

Through interviews with former Chemetco employees and analysis of the Wang System data, EPA identified tables that contain transactional data for shipments delivered to the Chemetco site. Data in these tables were selected and linked to identify shipments of materials to the Chemetco site, and identify the individual supplier, type and volume of materials and the transaction date. The content of these tables are summarized in Tables 1 – 3 at the end of this Protocol.

4.0 DEVELOPMENT OF CHEMETCO PRP RANKING BY WEIGHT

The weight of each shipment received at the Chemetco site was summed to determine the total weight of materials sent by each supplier. The sources of the transactional data were the three LOTFI tables (short for Lot Files) summarized in Tables 1 and 2, which contain data on shipments from individual suppliers directly to the Chemetco site and shipments from individual suppliers to the site via warehouses. The SUPCUS table contains identifier codes and addresses for each supplier of material to the Chemetco site and warehouses. The MATNA table contains codes that describe the types of material delivered to the Chemetco site. The steps taken to develop the PRP Ranking are described below, with summary results tabulated in Tables 4 and 5 at the end of the Protocol.

4.1 Shipments From Suppliers Direct To Chemetco Site

REPORT and REPORT XX data tables contain transactional data for shipments sent directly to the Chemetco site by individual suppliers, as indicated by the four-digit lot numbers. As noted in Table 2, REPORT and REPORT XX contain data from two different time periods. Shipment weights were summed by individual supplier, linking shipments to a supplier and its address recorded in the Wang System by the common data field (supplier code). Transactional data were not included from Report XX if the supplier code in the REPORT XX Table could not be linked to a single supplier name in the SUPCUS table (131,095 pounds) or the supplier name in REPORT XX was “Delete” (123,790 pounds) or “No Name” (43,180 pounds). Transactions excluded based on these criteria totaled approximately 298,065 pounds of material.

EPA understands that shipments with a supplier name of a “Chemetco Warehouse” in the REPORT and REPORT XX tables represent aggregated shipments of materials to the Chemetco site from the warehouses. The WHDATA table itemizes these shipments to the warehouses by supplier. Thus, EPA uses the WHDATA table, as opposed to the REPORT and REPORT XX tables, as the source of data for transactions shipped to the Chemetco site via the warehouses. Consequently, EPA has excluded aggregated weight associated with shipments from warehouses in the REPORT table by filtering out transactions with a supplier name of “Chemetco Warehouse” since this weight is itemized by individual suppliers in the WHDATA table. This filter results in the exclusion of 268,664,357 pounds of materials.

The total weights for materials that suppliers in the Chemetco PRP List shipped directly are 15,668,627 pounds (REPORT XX) and 265,895,089 pounds (REPORT).

4.2 Shipments From Warehouses To Chemetco Site

The WHDATA table contains transactional data for shipments that were shipped to the Chemetco site via warehouses. Each shipment was assigned a unique six-digit lot number by a Chemetco warehouse. As shown in Table 2, the WHDATA table includes transactional data primarily from 2000-2001, and roughly the same time period as the REPORT data. U.S. EPA summed shipment weights for each individual supplier, linking shipments to a supplier and its address reported in the Wang System by the supplier code. In the WHDATA table, the supplier code was generated by using the COSUP field, which is a five-digit code; the first two digits consisting of the warehouse code and the last three digits comprising the individual supplier code in the SUPCUS table. Four supplier codes could not be matched to individual suppliers in the SUPCUS table. Transactions associated with these suppliers, accounting for 681,457 pounds of material, were not included in the Chemetco PRP Ranking by Weight. The WHDATA table also included transactions with a supplier name of a Chemetco warehouse. These transactions were also excluded from consideration, and totaled 348,086 pounds.

U.S. EPA understands that shipments from individual suppliers were aggregated by material types at the warehouses and then transferred to the Chemetco site or other sites. Therefore, U.S. EPA filtered data in the WHDATA table by selecting only transactions where the SHIPTO field equals “Chemetco –.” Transactions with a SHIPTO field that was blank, indicating a third party, or with an entry of “Chemetco-G” or “Chemetco – W,” were not included in the Chemetco PRP List. The combined weight for the transactional data excluded by these filters is 56,535,392 pounds.

The total weight of materials shipped from suppliers to the Chemetco site by way of warehouses included in the PRP Ranking by Weight is 148,652,248 pounds.

Combining the findings from the analysis of the REPORT, REPORT XX and WHDATA tables results in a total of 1,519 suppliers and 430,215,964 pounds of material contribution. The weight totals are illustrated by category in Figure 1 at the end of this Protocol.

5.0 CHEMETCO PRP RANKING BY WEIGHT RESULTS

The results from the analysis above were compiled into a single list of suppliers and their total weight contributions to the Chemetco site. U.S. EPA performed corporate history and address verification research to identify corporate status, current names and addresses of the suppliers for the purposes of mailing the Special Notice Letter (SNL). Entities identified through this research with a common corporate affiliation were grouped together and their weight summed. PRPs were ranked by volume to create the PRP Ranking by Weight, which is included as Enclosure 5 to the SNL. The total weight is provided for each current liable party that will be sent a SNL. Supplier names as listed in the Wang System are listed on the PRP List underneath the current liable party name.

U.S. EPA applied a cutoff criteria of 150,000 pounds or greater for evaluation of parties to send the SNL. As shown in Table 5, this cutoff criteria results in 31% of the identified Chemetco suppliers (475) and 90.5% of the weight of materials represented in the Wang System (389,735,786). EPA did not send a SNL to certain parties at this time based on available information. No final liability determinations have been made. Parties supplying greater than 150,000 pounds of materials are identified in Enclosure 4 to the SNL (PRP Address List). The Valid Address field in the PRP Address List address indicates whether or not a current mailing address could be identified. Parties with a current mailing address identified (“Yes”) were sent a SNL. Further research is warranted for those parties with “No” in the Valid Mail Address field and no mail address is included in the PRP Address List. In accordance with privacy laws, addresses thought to be residential are identified with a Yes in the Residential Field and are not included in the PRP Address List.

TABLES

Table 1. Wang System files used to develop the Chemetco PRP List.

File Type	File Description	Specific Data Tables
LOTFI	Files documenting individual transactions/shipments to the Chemetco site tracked by unique lot numbers	REPORT REPORT XX WHDATA
SUPCUS	Listing of Supplier and address information identified by supplier codes	SUPCUS
MATNA	Chemetco Materials Codes and descriptions	MATNA

Table 2. Wang System LOTFI tables that contain shipments to Chemetco site

	REPORT XX	REPORT	WHDATA
Source	IEPA 2008	IEPA 2008	IEPA 2003
Time Period	1984 - 1992 (88.6% of entries from December 1986)	1996 - 2001 (99.6% of entries from April 2000 to October 2001)	1998 – 2001 (99.4% of entries from October 2000 to October 2001)
Transactions Recorded	Supplier to Chemetco site	Supplier to Chemetco site	Supplier to Chemetco site by way of Warehouse

Table 3. Fields in Wang System data tables used to calculate the amount of weight each supplier shipped to the Chemetco site

Data Table	Data Fields Utilized	Field Definition
SUPCUS	<ul style="list-style-type: none"> Supplier Code Supplier Address 	<ul style="list-style-type: none"> Typically a three-digit code unique to a supplier Provides street, city, state and zip code of supplier (at time of activity) <p><i>Links to supplier codes in the Report XX, Report and WHDATA LOTFI tables</i></p>
MATNA	<ul style="list-style-type: none"> Material Code Material Description 	<ul style="list-style-type: none"> A three digit code assigned by Chemetco for 439 types of materials Describes the materials associated with each material code <p><i>Links to material codes in the Report XX, Report and WHDATA LOTFI tables</i></p>
REPORT and REPORT XX	<ul style="list-style-type: none"> Lot Supplier SCD MCC Material Description Net Weight 	<ul style="list-style-type: none"> Unique lot number assigned at scale house at Chemetco site Supplier Name Unique supplier code to identify link to SUPCUS for supplier address Chemetco Material Code to link to MATNA table Describes type of material associated with material code Weight of shipment (lbs.)
WHDATA	<ul style="list-style-type: none"> Lot Number COSUP Material Code Net Ship To 	<ul style="list-style-type: none"> Unique lot number assigned at warehouse Unique supplier code to link to SUPCUS for supplier name and address Chemetco Material Code to link to MATNA table Net weight in pounds Identifies where warehouse shipped materials

Table 4. Summary of Weight Excluded from PRP Ranking by Weight

Excluded Weights	REPORT XX	REPORT	WHDATA	TOTAL
Supplier Name of "NO NAME"	43,180			43,180
Supplier name "Delete"	123,790			123,790
Match to individual supplier name not found	131,095		681,457	812,552
Supplier name of "Warehouse"	1,524,630	264,343,002	348,086	266,215,718
Shipments to other facilities			56,535,392	56,535,392
Total Weight Excluded	1,822,695	264,343,002	57,564,935	323,730,632

Table 5. Summary of Material Shipped to Chemetco Site

	REPORT XX	REPORT	WHDATA	TOTAL	SUPPLIERS GREATER THAN 150,000 POUNDS*
Total Weight (Lbs.) Included	15,668,627	265,895,089	148,652,248	430,215,964	389,735,786
No. of Individual Suppliers				1519	475
Percent of Total Suppliers				100%	31%
Percent of Total Weight				100%	90.50%

* = Final PRP List Ranking by Weight

Figures

**Figure 1. Summary of Chemetco Hartford Weight Totals from
REPORT, REPORT XX, and WHDATA LOTFI Tables**

- Total weight of materials shipped to Hartford site by individual suppliers that have been identified
- Total weight of materials excluded from PRP Ranking by Weight by individual suppliers that could not be identified
- Total weight of materials excluded from PRP Ranking by Weight based on Supplier Name = "Chemetco Warehouse"
- Weight of materials shipped to other facilities based on SHIP TO field ≠ "Chemetco" (i.e., SHIPTO = 3rd party, Chemetco – G, Chemetco – M, or blank.)
